

Polyplax auricularis: male (left); female (right).
Note: for purpose of showing relative sizes.

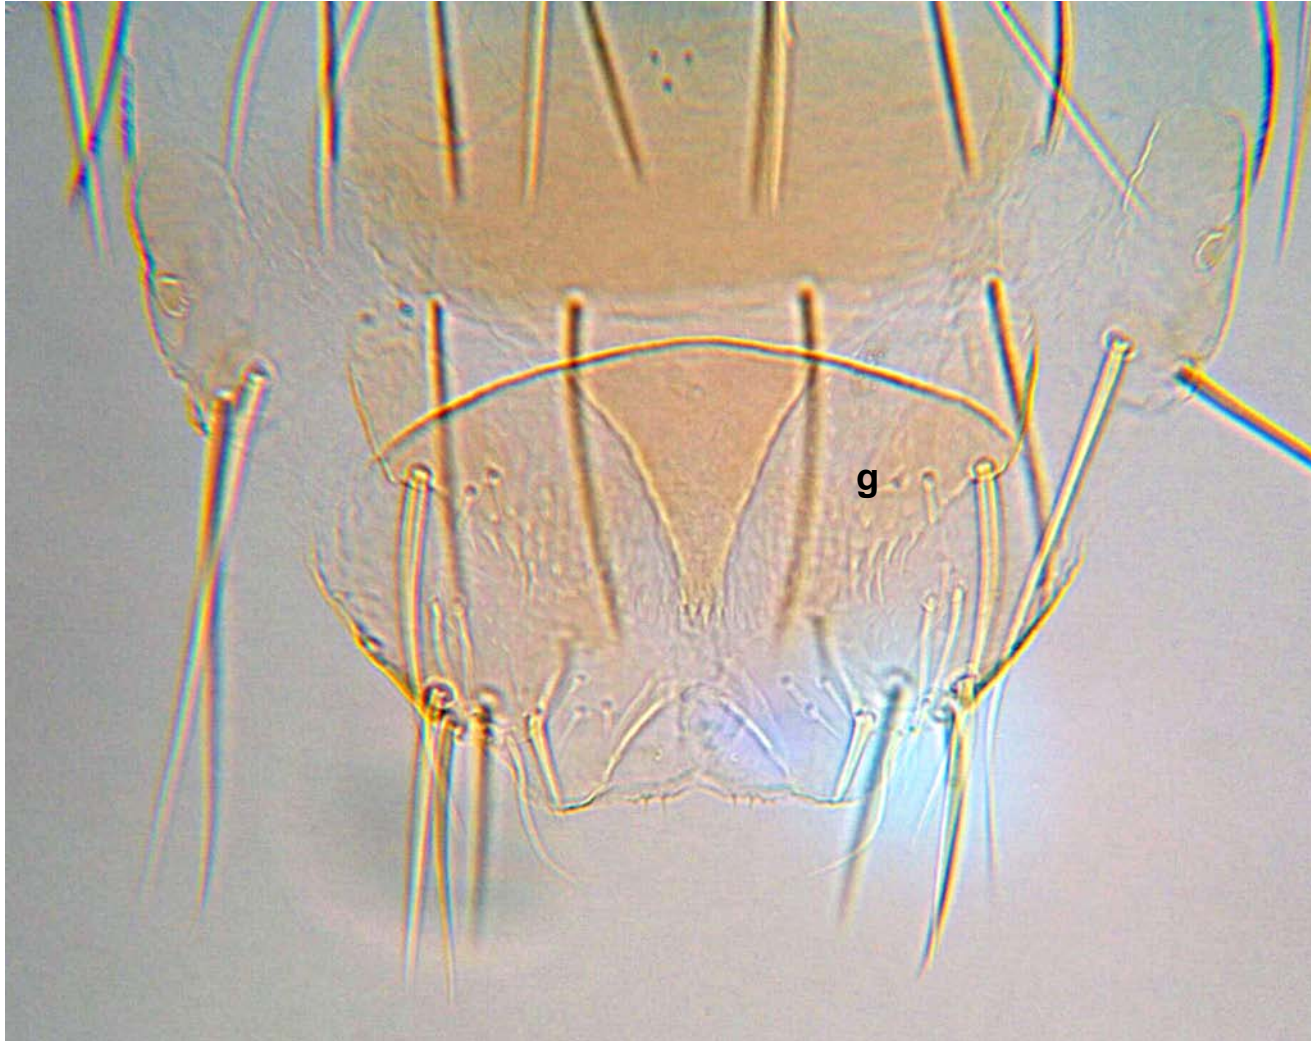

Polyplax auricularis: female (left); male (right). Note enlarged 1st antennal segment in both sexes, and the lack of eyes or ocular points.
(Ex: *Peromyscus maniculatus*; det: C. Maser).

Polyplax auricularis: male. In this genus the 2nd abdominal sternite does not articulate with paratergal plate (arrows). Legend: 3rd, third coxa; p, paratergal plate; s, spiracle (opening into tracheal system).

Polyplax auricularis: female; gonopod (g).

Polyplax auricularis: male: copulatory apparatus.
